

Armadillo Tracks[®]

SAFE, RELIABLE TRACKING OF ANY PIG, ON ANY PIPELINE

Whether cleaning or inspecting a pipeline, it is critical to know a pig's location, speed, and estimated time of arrival. Pigs must be carefully tracked to limit the consequences of lost or stuck tools, which can obstruct product flow and lead to unwanted service disruptions, or at worst, a pipeline rupture. With Armadillo Tracks, operators can safely track multiple pigs over long distances and remote terrain.

Why Choose Armadillo Tracks?

Through decades of experience, Corrpro has developed the safest and most reliable system for tracking pigs in any onshore environment. Armadillo Tracks is a flexible suite of solutions for permanent and conventional tracking.

- We provide best-in-class above-ground markers (AGM), through our expert team for full-service tracking.
- Maximize reliability with multi-sensor AGMs and passage data verified by remote tracking analysts.
- Minimize safety risks, costs, and your carbon footprint with tracking.
- Efficiently locate threats detected during inline inspections.

FLEXIBLE SOLUTIONS AND SERVICES TO MEET ANY PIG TRACKING NEED

Pipeline operators can expect the same Armadillo Tracks reliability and expert support with any of Corrpro Canada's tracking options.

Advanced Tracking Services

Corrpro Canada offers full-service and conventional tracking supported by Armadillo Tracks technology. Our AGMs pair an integrated geophone with additional sensors to achieve an industry-leading pass capture rate. Each pig passage is also verified by our expert tracking analysts for added reliability. Armadillo Tracks AGMs communicate seamlessly with LiveMap, so technicians and stakeholders can track tools from anywhere. Our AGMs can be deployed before a tool run, so they are in place and ready to track when needed.

Permanent Tracking

Armadillo Tracks is built for permanent installation on routinely pigged pipelines and challenging right-of-ways. Corrpro Canada designs and installs permanent solutions in close collaboration with pipeline operators and offers site surveys to optimize AGM placement. Our durable, low-maintenance AGMs can withstand harsh conditions in even the most remote areas. Armadillo Tracks Remote features cloud connectivity and a long battery life extended by solar energy and remote power management.

PRODUCT FEATURES

Armadillo Tracks Above-Ground Markers

Channels

- Seven sensor channels to detect EM frequencies, magnets, and audible pig passages
- Stream four channels at once

Wireless Connectivity

Comprehensive wireless communication options including: LTE Cellular, satellite, and Bluetooth

Power & Data Storage

- 120 hours of on-board data storage
- Extended battery life with remote power management

Temperature Range

Operates within -30°C to $+45^{\circ}\text{C}$

Durability

Rugged casing resists water, dust and extreme temperatures

Application

Any onshore liquid and gas pipelines

Get More from Corrpro Canada

Corrpro Canada provides pipeline integrity solutions that help companies safely and reliably deliver crucial energy resources. Our best-in-class technologies provide operators with actionable information needed to identify problem areas, reduce unnecessary pipeline repairs, and prolong asset life. See how Corrpro Canada can help protect your pipelines, your reputation, and your bottom line.
